## Product Introduction

The XFT-120N AED Trainer is designed to provide users with emergency response skill training. This device incorporates five training scenario modes and supports four different languages, as well as switching between fully automatic and semi-automatic modes.

This trainer features a low battery indicator and a scenario configuration memory function, ensuring a seamless training experience without interruption.

It stands out as a comprehensive, durable, and intelligent AED training simulator that combines practicality, resilience, and cutting-edge technology.
